WIRE ROPE HIGH PRESSURE LUBRICATION

We offer high pressure lubrication of wire ropes from 16mm - 104mm diameter range.

In only one application, wire rope can have its surface and groove pattern scraped clean of product build-up and grit, while at the same time new lubricant is uniformly applied to the newly-cleaned surface. Coating product then fills any open spaces within the groove pattern, and internal strands open to receive it. This is accomplished as the wire rope passes through a controlled, 100% pressurized, immersion within the Internal Seal Lubrication Chamber. Surface moisture trapped within the internal strands is displaced and replaced with the newly applied wire rope coating product.

Our Lubrication System penetrates and cleans under high pressure even the most compact types of wire rope, such as Non-rotating, Dyform, and Locked Coil with heavy grade lubricant from Nyrsofen, Germany.
